

PRESS RELEASE

January 2011 – Inks and Coatings / Paper Coatings:

ESP is pleased to announce the launch of two new FDA-compliant defoamers for the inks, overprint coatings, and paper coatings markets. ESP's FC 2-051-17 has shown very effective foam control with excellent film quality and solution stability across waterborne applications based on a range of emulsion polymer chemistries in pigmented and overprint systems in both thin-film and thick-film applications utilizing a variety of applicators ranging from screen coating, flexography, knife-coat, padding, roller coating, spray applicators, and gravure printing. ESP has also developed FC 245, a silicone-supported product for waterborne systems with strong foam control and compatibility across multiple applications. Both products are fully compliant with 21CFR175.300, 21CFR176.170, and 21CFR176.180 for FDA applications involving food contact.

About Enterprise Specialty Products:

Enterprise Specialty Products (ESP) is a leading manufacturer and supplier of antifoams to the wastewater treatment marketplace. As one of our core markets, ESP has extensive experience across all facets of wastewater processes, within both industrial and municipal settings. ESP services the foam control needs of the industrial marketplace as well, with leading-edge technology in silicone, synthetic, and oilbased antifoam/defoamer additives for a diverse range of industries including: graphics, metalworking, adhesives, nonwovens, emulsion polymer, textile, paper, paint, construction chemicals, mining, oilfield, and specialty chemicals. With over 100 years of collective experience, our technical staff applies their direct backgrounds in our target markets to provide real-world support for our customers. ESP is focused on customer service, and we emphasize building partnerships with our customers to provide solutions to their foaming challenges.
