

PRESS RELEASE

March 2011 – Metalworking Fluids:

ESP is pleased to announce the launch of a new defoamer for Metalworking Fluid (MWF) applications. ESP's FC 365 has been developed primarily for use in semi-synthetic and soluble oil coolants and cutting/grinding lubricants. Based on a new class of siloxane-supported chemistry, FC 365 has shown very good compatibility across an exceptionally wide variety of semi-syn chemistries (low-oil, high-oil, high-pressure specific additive packages, ...). This 100% active product delivers long lasting foam control, decreasing or eliminating the need for tankside defoamer addition. Customers have also welcomed the industry leading cost-efficiency long associated with ESP's defoamers for MWF applications.

About Enterprise Specialty Products:

Enterprise Specialty Products (ESP) is a leading manufacturer and supplier of antifoams to the wastewater treatment marketplace. As one of our core markets, ESP has extensive experience across all facets of wastewater processes, within both industrial and municipal settings. ESP services the foam control needs of the industrial marketplace as well, with leading-edge technology in silicone, synthetic, and oilbased antifoam/defoamer additives for a diverse range of industries including: graphics, metalworking, adhesives, nonwovens, emulsion polymer, textile, paper, paint, construction chemicals, mining, oilfield, and specialty chemicals. With over 120 years of collective experience, our technical staff applies their direct backgrounds in our target markets to provide real-world support for our customers. ESP is focused on customer service, and we emphasize building partnerships with our customers to provide solutions to their foaming challenges.
